SIMODRIVE® Documentation

Printing history

Brief details of this edition and previous editions are listed below.

The status of each edition is shown by the code in the "Remarks" column.

Status code in the "Remarks" column:

- A** New documentation
- B** Unrevised reprint with new Order No.
- C** Revised edition with new status

If factual changes have been made on the page since the last edition, this is indicated by a new edition coding in the header on that page.

Edition	Order No. for 1FK6	Remark

Foreword

Information on SIMODRIVE documentation

This document is part of the Technical Customer Documentation which has been developed for the SIMODRIVE system. All of the documents are available individually. You can obtain the complete list of documentation encompassing all Advertising Brochures, Catalogs, Overviews, Short Descriptions, Operating Instructions and Technical Descriptions with Order No., ordering address and price from your local Siemens office.

For reasons of transparency, this document does not include detailed information about all of the product types. Further, it cannot take into account every conceivable installation, operation or service/maintenance situation.

We would also like to point-out that the contents of this document are neither part of nor modify any prior or existing agreement, commitment or contractual relationship. The sales contract contains the entire obligation of Siemens. The warranty contained in the contract between the parties is the sole warranty of Siemens. Any statements contained herein neither create new warranties nor modify the existing warranty.

Structure of the documentation for 1FK and 1FT motors

The complete Planning Guide for 1FK and 1FT motors can be ordered as hard copy.

Table Foreword-1 Planning Guide with General Section and 1FK and 1FT motors

Title	Order No. (MLFB)	Language
1FK and 1FT AC Servomotors	6SN1197-0AC20-0AP0	German
1FK and 1FT AC Servomotors	6SN1197-0AC20-0BP0	English

The General Section and the individual motor series are also available separately.

Hotline

If you have any questions, please contact the following Hotline:

A&D Technical Support Tel.: +49 (180) 5050–222
Fax: +49 (180) 5050–223
eMail: adsupport@siemens.com

If you have any questions regarding the documentation (suggestions, corrections) then please send a fax to the following number:

+49 (9131) 98–2176

Fax form: Refer to the feedback sheet at the end of the document

Definition of qualified personnel

For the purpose of this document and warning information on the product itself, "Qualified personnel" are those who are familiar with the installation, mounting, start-up and operation of the equipment and are appropriately qualified and trained for the function which they perform.

- Trained and authorized to energize/de-energize, circuits and equipment in accordance with established safety procedures.
- Trained in the proper care and use of protective equipment in accordance with established safety procedures.
- Trained in rendering first aid.

Explanation of the symbols

The following danger and warning concept is used in this document:

Danger

This symbol is always used if death, severe personal injury or substantial material damage **will** result if proper precautions are not taken.

Warning

This symbol is always used if death, severe personal injury or substantial material damage **can** result if proper precautions are not taken.

Caution

This symbol is always used if minor personal injury or material damage **can** result if proper precautions are not taken.

Caution

The warning note (without a warning triangle) means that material damage **can** occur if proper precautions are not taken.

Notice

This warning note indicates that an undesirable result or an undesirable status **can** occur if the appropriate information is not observed.

Note

In the sense of this document there is a possible advantage/benefit if the note text is observed.

Danger and warning information

Danger

- It is not permissible to commission the equipment until it has been clearly identified that the machine, in which the described components are to be installed, is in full compliance with the specifications in Directive 98/37/EC.
- Only appropriately qualified personnel may commission SIMODRIVE units and AC motors.
- This personnel must take into account the technical customer documentation belonging to the product and be knowledgeable and observe the specified information and instructions on the hazard and warning labels.
- When electrical equipment and motors are operated, the associated electrical circuits are at hazardous voltage levels.
- When the machine or system is operated, hazardous axis movements can occur.
- All of the work carried-out in the electrical machine or system must be carried-out with it in a no-voltage condition.
- SIMODRIVE drive units are designed for operation on low-ohmic, grounded line supplies (TN line supplies).

Warning

- The successful and safe operation of this equipment and motors is dependent on proper transport, storage, installation and mounting as well as careful operator control, service and maintenance.
- For special versions of the drive units and motors, information and data in the catalogs and quotations additionally apply.
- In addition to the information and instructions on hazards and warnings in the technical customer documentation supplied, the applicable national, local and machine/system-specific regulations and requirements must be carefully taken into consideration.

Caution

- The motors can have surface temperatures of over +80° C.
- This is the reason that it is not permissible that temperature-sensitive parts and components – e.g. cables or electrical components – are in contact with the motor or fastened to the motor.
- When connecting and routing connecting cables, the following must be carefully observed:
 - they may not be damaged
 - they may not be strained, and
 - they may not be able to be touched by rotating components.

Caution

- SIMODRIVE drive units with AC motors are subject to a voltage test, in compliance with EN 50178 as part of a routine test. While the electrical equipment of industrial machines is being subject to a voltage test in compliance with EN 60204-1, Section 19.4, all of the SIMODRIVE equipment connections must be disconnected/withdrawn in order to avoid damaging the SIMODRIVE equipment.
 - Motors should be connected-up according to the circuit diagram supplied. It is not permissible to directly connect the motors to the three-phase line supply. Motors will be destroyed if they are connected directly to the three-phase line supply.
-

Note

- SIMODRIVE equipment with AC motors fulfill, in the operational state and in dry operating areas, the Low-Voltage Directive 73/23/EEC.
 - SIMODRIVE equipment with AC motors fulfill, in the configurations which are specified in the associated EC Declaration of Conformity, the EMC Directive 89/336/EEC.
-

ESDS information and instructions

Caution

ElectroStatic Discharge Sensitive devices (ESDS) are individual components, integrated circuits or boards which can be damaged by electrostatic fields or electrostatic discharge.

Handling ESDS boards:

- The human body, working area and packaging should be well grounded when handling ESDS components!
- Electronic components may only be touched by people in ESDS areas with conductive flooring if
 - they are grounded through an ESDS wrist strap
 - they are wearing ESDS shoes or ESDS shoe grounding strips.
- Electronic boards should only be touched when absolutely necessary.
- Electronic boards may not come into contact with synthetic materials and clothing manufactured out of man-made fibers.
- Electronic boards may only be placed down on conductive surfaces (table with ESDS surface, conductive ESDS foam rubber, ESDS packing bag, ESDS transport containers).
- Electronic boards may not be brought close to data terminals, monitors or television sets (minimum clearance to screen > 10 cm).
- Measuring work may only be carried out on the electronic boards if
 - the measuring device is grounded (e.g. via the protective conductor) or
 - for floating measuring equipment, the probe is briefly discharged before making measurements (e.g. a bare control housing is touched).

Motor Description

1.1 Features and technical data

Applications

The 1FT5 series has been developed for use on different types of machine tools.

In conjunction with the SIMODRIVE 611 analog drive converter system, the motors are admirably suited for

- Feed drives for lathes and milling machines
- Machining centers
- Grinding and special-purpose machines
- Robots and handling equipment
- Woodworking

The 1FT5 series can be directly mounted onto feed spindles and onto gearboxes with toothed wheels or toothed belts.

Features

Depending on the shaft height, the 1FT5 series has stall torques from 0.9 up to 185 Nm at rated speeds from 1200 to 6000 RPM. The motors have a high overload capacity over the complete speed control range.

Standards, Regulations

The appropriate Standards, Regulations are directly assigned to the functional requirements.

1.2 Order designation

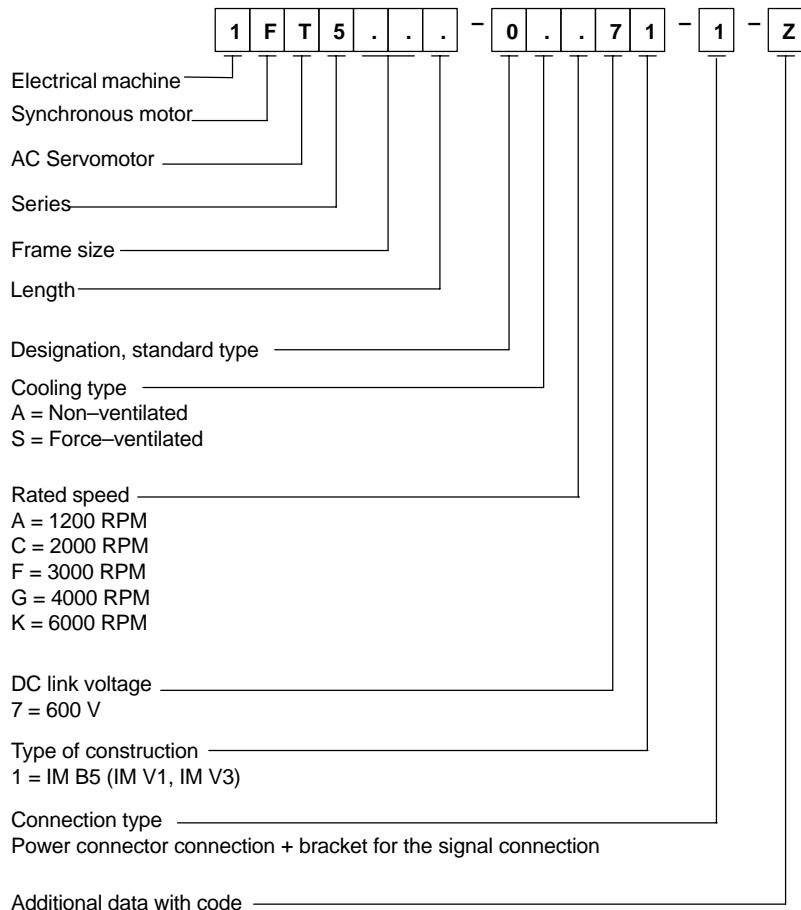

1.2 Order designation

Structure of the order designation

The order designation comprises a combination of digits and letters. It is subdivided into four hyphenated blocks.

The first block has seven positions and designates the machine type. Additional features are coded in the second block. The third and fourth blocks are provided for additional data.

1.2.1 Order designation, standard types

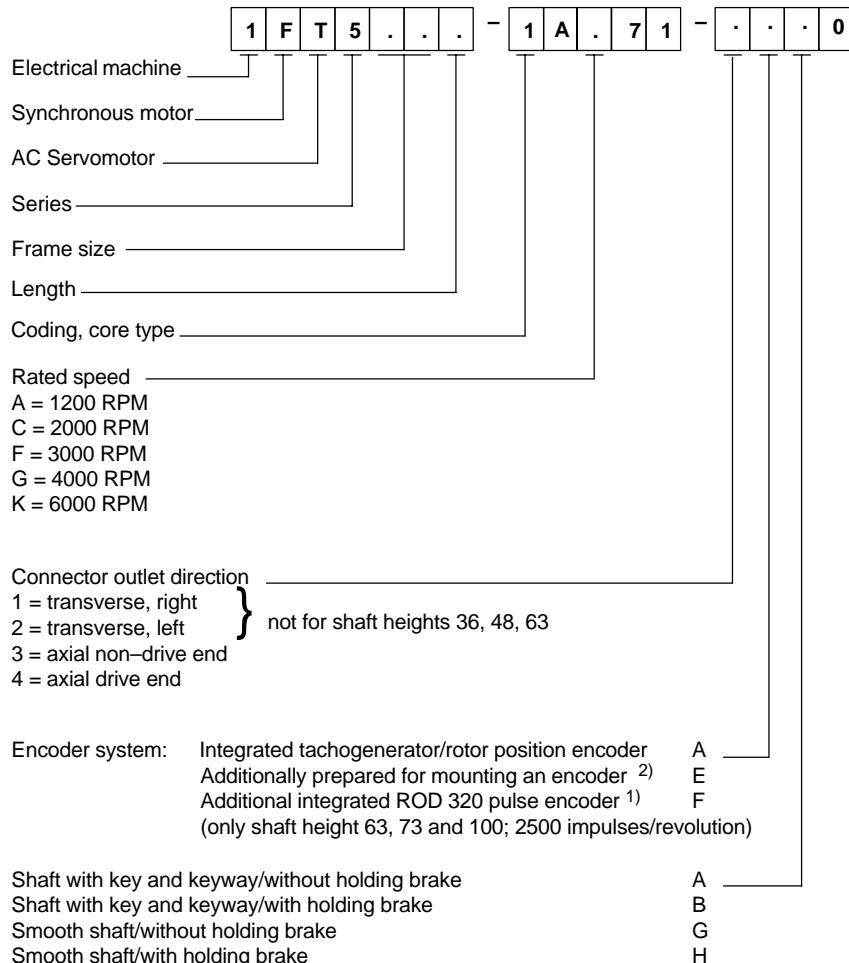

Supplementary data for standard types and options

Plain text data	Brief designation
Degree of protection IP 67 (not for force-ventilated motors) ⁷⁾ IP 68 (not for force-ventilated motors) ⁷⁾	K93 M24
Second rating plate (this is standard for core types)	K31
Connector outlet direction ¹⁾ Cable entry from the drive end	K83 ^{4) 7) 11)}
Cable entry from the non-drive end	K84 ^{4) 7)}
rotated through 180° (with respect to the Standard)	K85 ⁷⁾
Radial shaft sealing acc. to DIN 3760	K18
Shaft end: Smooth shaft	K42
Vibration severity (ISO 2373) Severity R (reduced)	K01
600 to 1800 RPM $\leq 0.71 \text{ mm/s}$ >1800 to 3600 RPM $\leq 1.12 \text{ mm/s}$	
Shaft and flange precision, tolerance R acc. to DIN 42955	K04
Motor with mounted pulse encoder ⁹⁾ 5000 pulses/revolutions ⁷⁾ 2500 pulses/revolutions ⁷⁾ 2000 pulses/revolutions ⁷⁾ 1000 pulses/revolutions ⁷⁾	H28 H27 H26 H22
The motor is prepared for mounting an encoder (incremental or absolute) with synchronous flange ^{2) 7) 11)}	G51
Motor with mounted ROD 320 pulse encoder ^{3) 6)} 5000 pulses/revolutions ⁷⁾ 2500 pulses/revolutions ⁷⁾ 2000 pulses/revolutions ⁷⁾ 1250 pulses/revolutions ⁷⁾	H04 G44 G42 H01
Holding brake (integrated) ⁸⁾	G45
Motor with mounted planetary gear ^{10) 11)}	V□□
Working brake; mounted ^{4) 11)}	C00
Prepared with a retrofit kit for mounting an encoder (G51) with mounting instructions ⁵⁾	EWN: 519.4033804: 1FT5034 to 1FT5036 519.4033803: 1FT5042 to 1FT5046 519.4033801: 1FT5062 to 1FT5066 519.4033802: 1FT5072 to 1FT5108

- 1) Standard version corresponding to the dimension drawings
- 2) For 1FT503□, 1FT504□ absolute value encoder mounting, only on request; not for force-ventilated motors
- 3) For 1FT503□, 1FT504□ not possible; not for force-ventilated motors
- 4) For 1FT503□, 1FT504□ and 1FT506□ not possible
- 5) Only available ex-stock up to 2 motors per motor version
- 6) Limiting frequency: 300 kHz; motors may only be designed for a winding temperature rise $\Delta T=60 \text{ K}$.
Cannot be combined with an axial connector outlet at the non-drive end.
- 7) Options mutually exclude one another
- 8) For motors with brake, axial forces are not permissible in operation
- 9) Pulse encoder with axial cable outlet
- 10) Only vibration severity stage N can be guaranteed for the motor and gearbox unit
- 11) Not possible for short motors

1.2 Order designation

1.2.2 Order designation, core types

Ordering example

When ordering a 1FT5 AC servomotor with options, it is necessary to specify the ordering code "–Z" and in addition the short designation. For core types, the last ordering block is appropriately supplemented.

The following is required:

An AC servomotor

- To connect to a SIMODRIVE 611 drive converter with a 600 V DC link voltage
- Rated voltage, 3000 RPM
- Stall torque, 33 Nm at $\Delta T = 100$ K
- Type of construction: IM B5 (IM V1, IM V3)
- Connection type: Power connectors for motors/brake, signal connector for the encoder system
- With integrated holding brake
- With mounted ROD 426 pulse encoder (1000 pulses/revolution)

The following should be ordered:**Order No.:**

1FT5 AC servomotor

1FT5102–0AF71–1–Z

$n_N = 3000$ RPM,

$M_0 = 33$ Nm at $\Delta T = 100$ K

Special version:

Codes

- Integrated holding brake

G45

- Mounted ROD 426 pulse encoder

H22

Order No., core type:

1FT5102–1AF71–1EB0

(the same motor but only prepared for mounting
an encoder)

1.3 Technical version, 1FT5 motors

1.3 Technical version, 1FT5 motors

Table 1-1 Features of 1FT5 standard motors

Technical features	Version
Motor type	Permanent-magnet synchronous AC servomotor
Type of construction (acc. to EN 60034-7; IEC 60034-7)	IM B5 (IM V1, IM V3); option, refer to Table 1-2
Degree of protection (acc. to EN 60034-5; IEC 60034-5)	IP 64, option, refer to Table 1-2
Cooling (acc. to EN 60034-6; IEC 60034-6)	Non-ventilated; options, refer to Table 1-2
Thermal motor protection (acc. to IEC and EN 60034-11)	PTC in the stator winding
Shaft end (acc. to DIN 748-3; IEC 60072-1)	Cylindrical; with keyway and with key; tolerance zone k6; Option, refer to Table 1-2
Rating plate	A second rating plate is provided for core types
Radial eccentricity, concentricity and axial eccentricity (acc. to DIN 42955; IEC 60072-1)	Tolerance N (normal); options, refer to Table 1-2
Vibration severity (acc. to EN 60034-14; IEC 60034-14)	Stage N (normal); options, refer to Table 1-2
Balancing (acc. to IEC and EN 60034-14)	Full-key balancing
Bearings	Deep-groove ball bearings with (permanent lubrication) bearing lifetime > 20000 h Locating bearing on the drive end
Stator winding insulation (acc. to EN 60034-1; IEC 60034-1)	Temperature rise class F for a winding temperature rise of $\Delta T = 100$ K for an ambient temperature of 40 °C. For ambient temperatures > 40 °C, the power must be reduced (de-rated) (refer to the documentation "General Section").
Installation altitude (acc. to IEC and EN 60034-1)	≤ 1000 m above sea level, otherwise power de-rating (VDE0530) 2000 m factor 0.94 2500 m factor 0.9 (refer to the documentation "General Section")
Magnetic materials	Rare earth materials
Electrical connection	Connector for power and encoder signals <ul style="list-style-type: none">• Connector outlet direction can be selected
Encoder system	Integrated analog tachometer <ul style="list-style-type: none">• Speed sensing Magnetic elements or Hall sensors <ul style="list-style-type: none">• Rotor position sensing

Options

Table 1-2 Options

Technical feature	Version
Degree of protection (acc. to EN 60034-5; IEC 60034-5)	IP 67, IP 68 (only non-ventilated)
Cooling	Forced cooling
Shaft end (according to DIN 748-3; IEC 60072-1)	Cylindrical without keyway (DIN 6885); tolerance zone k6
Radial eccentricity, concentricity, axial eccentricity (DIN 42955; IEC 60072-1)	Tolerance R
Vibration severity (acc. to EN 60034-14; IEC 60034-14)	Stage R
Mounted/integrated components	<ul style="list-style-type: none"> • Fail-safe holding brake; supply voltage $24V \pm 10\%$ (acc. to DIN 0580 7/79) • Working brake (shaft height 71, shaft height 100 and shaft height 132) • Integrated pulse encoder (shaft height 63 to shaft height 132) • Mounted pulse encoder • Prepared for mounting an encoder • Mounted planetary gearbox

1.3 Technical version, 1FT5 motors

Technical data

Core types have a grey background. **100 K** values are specified in the table.

6FX5-002 = MOTION-CONNECT 500

Technical data, refer to Catalog NC Z

1.4 Functions and expanded functions

Armature short-circuit braking

For a definition refer to the "General Section" of the documentation.

Brake resistors

An optimum braking time is achieved by appropriately dimensioning the braking resistors. The braking torques which are obtained are also listed in the tables. The data applies for braking from the rated speed. If the motor brakes from another speed, then the braking time **cannot** be linearly reduced. However, longer braking times cannot occur.

The resistor rating must be coordinated with the particular I^2t load capacity, refer to the documentation "General Section".

1.5 Cooling

The different cooling types (non-ventilated and force-ventilated) are described in the "General Section" documentation.

Forced ventilation

Degree of protection: IP 54 (acc. to EN 60529). IP 67 cannot be fulfilled. It is not permissible that the hot discharged air is drawn-in again.

The separately-driven fan can be retrofitted. However, the following measures must be carefully observed. For shaft height 100, only a Siemens-authorized workshop may do the retrofit work.

In some cases, the motors have larger power connectors as a result of the higher torques and the associated higher phase currents.

Shaft heights 71, 100 and 132 differ as follows:

- **Shaft heights 100 and 132:** Air flow direction from the drive end to non-drive end

Air is drawn-in from the non-drive end through the corners of the extruded profile housing using a mounted radial fan.

The modified dimensions can be taken from the dimension drawings.

Connection system: Terminal box

Supply voltage: 3-ph. 400/460 V AC, 50/60 Hz

Maximum current: 0.4 A

Weight of the cooling assembly: approx. 5.6 kg

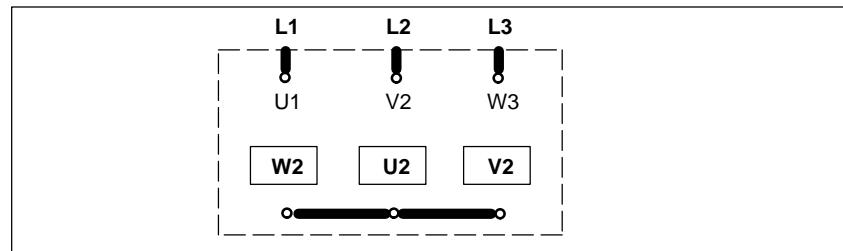

Fig. 1-1 Fan connection for shaft heights 100/132

- **Shaft height 71:** Air flow direction from the non-drive end to drive end

When the direction of the air flow is reversed, the torque yield is reduced by approx. 20 %.

Mechanical changes to the motor with respect to non-ventilated versions:

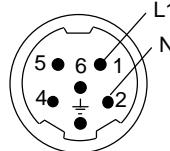

- The power connector is set about 12 mm higher.
- A sheet metal envelope is located over the motor frame from the non-drive end side. The axial fan is mounted in this sheet metal envelope. As a result of the recesses in the sheet metal envelope at the connectors, at these locations, the motor is only partially cooled with air (three-sided cooling).
- The motor dimensions can be taken from the dimension drawings.

1.5 Cooling

Connection system:: Connector ¹⁾, 6FX2003–0CA10
Supply voltage: 1-ph. 230/260 V AC, 50/60 Hz
Maximum current: 0.3 A
Weight of the fan assembly: approx. 4.8 kg

Connector assignment:

Fan connection (AH 71)

Minimum clearance between mounted components and the air discharge opening

The following minimum clearance to customer-specific mounted components and the air discharge opening must be maintained:

Table 1-13 Minimum clearance to customer-specific components

Shaft height [mm]	Minimum clearance [mm]
71	20
100	30
132	60

1) Power connector, Size 1

1.6 Electrical connections

The motors have been designed to be connected to a 600 V DC link voltage with an impressed squarewave current. Together with the analog SIMODRIVE 611 drive unit, these motors form a complete drive system.

For DC link voltages which differ from 600 V (max. 700 V), the voltage limiting characteristic is shifted as described in the "General Section" documentation.

Note

When a drive converter is, for example, connected to a 480 V line supply, then DC link voltages > 600 V are obtained. The following restriction then applies: Shaft heights 36, 48, 63, 71 may only be utilized according to $\Delta T=60$ K limit values.

Warning

The motors are not suitable for connecting directly to the line supply.

1.6 Electrical connections

Connection assignment, power and signal connectors

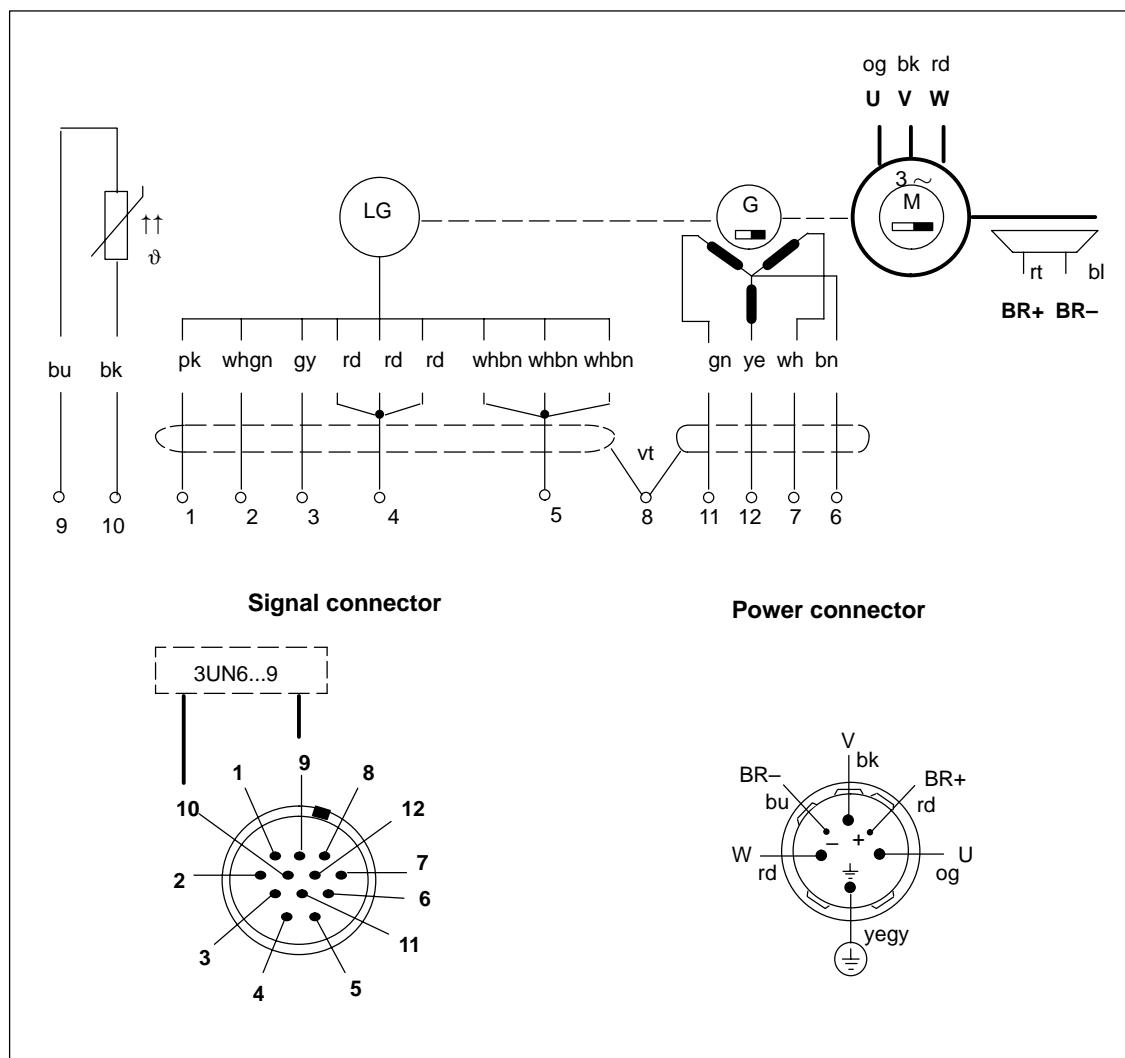

Fig. 1-2 Connection assignment: Power, brake, tachogenerator, encoder and temperature sensor

1.7 Drive-out coupling

For the ordering address, refer to the documentation "General Section" or the Internet www.ktr.com

Table 1-14 Assignment of the drive-out couplings to the motors

Shaft height	Rotex GS Type	Torques which can be transferred with 98 Sh-A-GS pinion	
		T _{KN} [Nm]	T _{Kmax} [Nm]
63	24/28	60	120
71	28/32	160	320
100	38/45	325	650

It may be necessary to use other pinions (e.g. Shore hardness 80 SH-A). This must be optimally harmonized together with the mounted mechanical system.

Warning

The accelerating torque may not exceed the clamping torque of the coupling!

Technical Data and Characteristics

2.1 Speed-torque diagrams

Note

- DC link voltages > 600 V occur when the motors are fed from drive converters connected to 480 V line supplies. The following restrictions apply:
 - Shaft heights 36, 48, 63 and 71 may only be utilized to $\Delta T = 60$ K.
 - Shaft heights 100 and 132 may still be utilized to $\Delta T = 100$ K.
 - For a description of the shift of the voltage limiting characteristics, refer to the documentation "General Section".
 - The specified thermal S3 limits are referred to $\Delta T = 100$ K.
-

Note

For 1FT5 motors, the rotor moment of inertia is specified without tachometer.

The figure shows a speed-torque diagram with torque M [Nm] on the y-axis (0 to 3.2) and speed n [RPM] on the x-axis (0 to 6400). Three curves are plotted: a top curve labeled 'K' starting at (0, 3.2) and decreasing to (6400, 0.6); a middle curve labeled 'S3-25%' starting at (0, 1.3) and decreasing to (6400, 0.5); and a bottom curve labeled 'S3-60%' starting at (0, 0.8) and decreasing to (6400, 0.4). A horizontal dashed line is drawn at M = 0.8 Nm, and a vertical dashed line is drawn at n = 4000 RPM.

The figure is a speed-torque diagram for the 1FT5062 motor. The vertical axis represents torque M in Nm, ranging from 0 to 9. The horizontal axis represents speed n in RPM, ranging from 0 to 6400. There are several curves plotted:

- A family of curves labeled '2)' representing torque levels at 600 V DC link voltage.
- A curve labeled 'K' representing the no-load torque.
- Three horizontal lines representing torque levels at 25% and 60% of the rated torque ($M_N = 2.4$ Nm).
- A curve labeled 'S3-25%' corresponding to the 25% torque level.
- A curve labeled 'S3-60%' corresponding to the 60% torque level.
- A curve labeled 'S1' corresponding to the no-load torque curve 'K'.

 Key points marked on the curves include C (at ~1600 RPM), F (at ~2400 RPM), G (at ~3200 RPM), and K (no-load torque point). Dashed lines connect these points to their respective values on the axes.

The graph plots torque M [Nm] on the vertical axis (0 to 18) against speed n [RPM] on the horizontal axis (0 to 6400). Several curves are shown, labeled C, F, G, K, S3-25%, S3-60%, and S1. Curves C, F, G, and K represent torque characteristics at different power levels (25%, 60%, 100%, and 100% with a higher torque peak). Curves S3-25%, S3-60%, and S1 represent torque limits for different operating modes.

<p>The figure is a speed-torque diagram for the 1FT5066 motor. The vertical axis represents torque M in Nm, ranging from 0 to 36. The horizontal axis represents speed n in RPM, ranging from 0 to 6400. There are four main curves labeled C, F, G, and K, which represent different torque levels. These curves are labeled with '2)' at their lower ends. Three horizontal lines represent constant torque levels: S3-25% (highest), S3-60% (middle), and S1 (lowest). The intersection of the S3-60% line with the K curve defines the rated operating point at approximately 2000 RPM and 6.7 Nm. The intersection with the G curve defines the standstill torque at 0 RPM and 8.0 Nm.</p>

The graph plots torque M [Nm] on the vertical axis (0 to 36) against speed n [RPM] on the horizontal axis (0 to 6400). It features several curves representing different operating conditions:

- Two primary torque curves: one starting at approximately 18 Nm at 800 RPM and another starting at approximately 12 Nm at 1600 RPM.
- Three load torque curves labeled C, F, G, and K, which decrease linearly with increasing speed.
- Performance levels indicated by dashed lines and labels:
 - S1: A horizontal line at $M \approx 4$ Nm.
 - S3-60%: A horizontal line at $M \approx 12$ Nm.
 - S3-25%: A horizontal line at $M \approx 18$ Nm.
- Two regions labeled "2)" indicating reduced torque capability at higher speeds.

The figure is a speed-torque diagram for the 1FT5076 motor. The vertical axis represents torque M in Nm, ranging from 0 to 90. The horizontal axis represents speed n in RPM, ranging from 0 to 6400. There are several curves plotted:

- A primary curve labeled 'K' starts at approximately 80 Nm at 1200 RPM and decreases linearly to zero at 4800 RPM.
- A secondary curve labeled '2)' starts at approximately 55 Nm at 1600 RPM and decreases linearly to zero at 4800 RPM.
- A tertiary curve labeled '2)' starts at approximately 30 Nm at 1600 RPM and decreases linearly to zero at 4800 RPM.
- A fourth curve labeled '2)' starts at approximately 20 Nm at 1600 RPM and decreases linearly to zero at 4800 RPM.
- A fifth curve labeled 'S3-25%' starts at approximately 25 Nm at 1600 RPM and decreases linearly to zero at 4800 RPM.
- A sixth curve labeled 'S3-60%' starts at approximately 35 Nm at 1600 RPM and decreases linearly to zero at 4800 RPM.
- A seventh curve labeled 'S1' starts at approximately 20 Nm at 1600 RPM and decreases linearly to zero at 4800 RPM.

 Specific points on the primary curve are marked with letters C, F, G, and K. Vertical dashed lines connect these points to the corresponding curves on the graph.

The figure is a speed-torque diagram for the 1FT5102 motor. The vertical axis represents torque M in Nm, ranging from 0 to 90. The horizontal axis represents speed n in RPM, ranging from 0 to 4000. There are several curves plotted, labeled with letters A through G and numbers 1) and 2). Curves A, C, F, and G are steeper than curves D, E, and H. Horizontal lines are drawn at 30, 40, 50, and 80 Nm. Vertical dashed lines are at 1000, 1500, 2000, 2500, 3000, 3500, and 4000 RPM. The curves represent different operating conditions, such as S1, S3-60%, and S3-25%.

<p>The figure is a speed-torque diagram for the 1FT5104 motor. The vertical axis represents torque M in Nm, ranging from 0 to 180. The horizontal axis represents speed n in RPM, ranging from 0 to 3200. Three primary torque curves are shown: a top curve labeled 'A' (at ~160 Nm), a middle curve labeled 'C' (at ~140 Nm), and a bottom curve labeled 'F' (at ~120 Nm). These curves represent the motor's torque characteristics at different power levels. Three load torque curves are also plotted: a top curve labeled 'S3-25%' (at ~60 Nm), a middle curve labeled 'S3-60%' (at ~40 Nm), and a bottom curve labeled 'S1' (at ~20 Nm). The intersection of the motor's torque curves and the load torque curves determines the operating point. For example, at 1200 RPM, the motor can operate at point A (160 Nm) or point C (140 Nm) depending on the load. The 'F' curve intersects the 'S1' load curve at approximately 2800 RPM.</p>

The graph plots torque M [Nm] on the y-axis (0 to 225) against speed n [RPM] on the x-axis (0 to 3200). Three curves are shown: a top curve labeled 'A' (at ~1000 RPM), a middle curve labeled 'C' (at ~1500 RPM), and a bottom curve labeled 'F' (at ~2000 RPM). Each curve has a vertical dashed line at its starting point. Three horizontal dashed lines represent voltage levels: the top one is labeled 'S3-25%', the middle one is 'S3-60%', and the bottom one is 'S1'. The curves for A, C, and F all intersect at the same point on the S1 line at approximately 2800 RPM.

The figure is a speed-torque diagram for the 1FT5132 motor. The vertical axis represents torque M in Nm, ranging from 0 to 225. The horizontal axis represents speed n in RPM, ranging from 0 to 3200. There are three sets of curves representing different operating conditions:

- S3-25%:** Represented by a single curve starting at approximately 115 Nm at 0 RPM and decreasing to about 60 Nm at 3200 RPM.
- S3-60%:** Represented by a single curve starting at approximately 85 Nm at 0 RPM and decreasing to about 40 Nm at 3200 RPM.
- S1:** Represented by a single curve starting at approximately 75 Nm at 0 RPM and decreasing to about 30 Nm at 3200 RPM.

Three specific torque levels are marked on the vertical axis: 125 Nm, 175 Nm, and 200 Nm. Three points on the torque curves are labeled A, C, and F, corresponding to these marked values. Dashed lines connect these points to the horizontal axis, indicating the speeds at which these torques are produced. The point A is at approximately 850 RPM, C is at 1600 RPM, and F is at 2000 RPM. The regions between the curves are shaded with diagonal lines.

Weight (without brake)	m	kg	95	95	

The figure is a speed-torque diagram for the 1FT5134 motor. The vertical axis represents torque M in Nm, ranging from 0 to 360. The horizontal axis represents speed n in RPM, ranging from 0 to 2000. Three primary torque curves are shown: curve A (top), curve C (middle), and curve S1 (bottom). These curves represent different operating conditions. Two additional curves, labeled S3-25% and S3-60%, are plotted as dashed lines, representing torque levels at 25% and 60% of the rated torque. A note indicates that these curves apply for a 600 V DC link voltage. The curves show a characteristic drop in torque as speed increases beyond the rated point.

The graph plots torque M [Nm] on the vertical axis (0 to 180) against speed n [RPM] on the horizontal axis (0 to 3200). A solid curve starts at approximately (0, 68) and decreases to about (3200, 55). A dashed horizontal line at $M = 180$ Nm intersects the curve at two points, labeled 'F' and 'S1'. A vertical dashed line at $n = 2000$ RPM intersects the curve at point 'I).

The graph plots torque M [Nm] on the vertical axis against speed n [RPM] on the horizontal axis. The vertical axis has major ticks at 0, 40, 80, 120, 160, 200, 240, 280, 320, and 360. The horizontal axis has major ticks at 0, 250, 500, 750, 1000, 1250, 1500, 1750, and 2000. A curve labeled '1)' starts at point A (approx. 900 RPM, 320 Nm) and decreases linearly to point C (approx. 1500 RPM, 320 Nm). A horizontal line labeled 'S1' starts at approximately 130 Nm at 0 RPM and remains constant up to 2000 RPM. Dashed grid lines are present at every 50 RPM and 40 Nm intervals.

The figure is a speed-torque diagram for the 1FT5138 motor. The vertical axis represents torque M in Nm, ranging from 0 to 450. The horizontal axis represents speed n in RPM, ranging from 0 to 1280. A solid curve starts at approximately (0, 180) and decreases to about (1280, 160). A dashed line labeled 'S1' is drawn vertically from the point (1280, 160) down to the x-axis. A point 'A' is marked on the curve at a torque of 400 Nm. A line labeled '1)' extends from point A downwards and to the right, representing the torque-speed characteristic for a 600 V DC link voltage.

Weight (with brake) m	m	kg	9.0	9.0	
Weight (without brake) m	m	kg	7.5	7.5	

The figure is a speed-torque diagram for motor 1FT5070. The vertical axis represents torque M in Nm, ranging from 0 to 18. The horizontal axis represents speed n in RPM, ranging from 0 to 6400. Three primary torque curves are shown: a top curve labeled 'C' and 'F' which drops to zero at approximately 3000 RPM; a middle curve labeled '1)' which drops to zero at approximately 4000 RPM; and a bottom curve labeled '1)' which drops to zero at approximately 5000 RPM. Three operating regions are indicated by shaded areas: 'S1' at the lowest torque level, 'S3-25%' in the middle range, and 'S3-60%' at the highest torque level. Dashed lines project the operating points onto the axes.

Thermal time constant T _{th}	T _{th}	min	30	30	
Weight (with brake) m	m	kg	10	10	
Weight (without brake) m	m	kg	8.5	8.5	

The graph shows three torque-speed characteristics (S3-25%, S3-60%, S1) plotted against RPM. The S3-25% curve is the highest, followed by S3-60%, and then S1. Point C is located on the S3-25% curve at approximately 1500 RPM. Point F is located on the S3-25% curve at approximately 1800 RPM. Two '1)' labels are placed near the S3-25% curve between 1500 and 2400 RPM, likely indicating specific operating conditions or torque levels.

The graph plots torque M [Nm] on the vertical axis (0 to 45) against speed n [RPM] on the horizontal axis (0 to 6400). Several curves are shown: a steep curve labeled 'C' starting at ~40 Nm at 1000 RPM; a flatter curve labeled 'F' starting at ~40 Nm at 1500 RPM; two curves labeled '1)' starting at ~28 Nm at 1500 RPM; and three horizontal curves labeled 'S3-25 %', 'S3-60 %', and 'S1' representing different load torque levels. The curves intersect to determine the operating point.

<p>The figure is a speed-torque diagram for motor 1FT5101. The vertical axis represents torque M in Nm, ranging from 0 to 90. The horizontal axis represents speed n in RPM, ranging from 0 to 6400. There are three main torque curves: a primary curve starting at approximately 28 Nm at 0 RPM and decreasing to about 20 Nm at 6400 RPM; a secondary curve starting at approximately 22 Nm at 0 RPM and decreasing to about 12 Nm at 6400 RPM; and a tertiary curve starting at approximately 15 Nm at 0 RPM and decreasing to about 5 Nm at 6400 RPM. Two load torque curves are shown: a steep curve labeled 'C' peaking at ~70 Nm near 1600 RPM and dropping to zero by 2400 RPM; and a flatter curve labeled 'F' peaking at ~65 Nm near 2400 RPM and dropping to zero by 3200 RPM. Three horizontal dashed lines indicate operating levels: 'S3-25 %' at ~22 Nm, 'S3-60 %' at ~15 Nm, and 'S1' at ~5 Nm. The point where the primary motor curve intersects the S3-25% load line is marked with a vertical dashed line at approximately 4000 RPM.</p>

2.3 Axial forces

Axial force stressing

Warning

Axial forces are not permissible for motors with integrated holding brake!

When using, e.g. helical gearwheels as drive element, in addition to the radial force, the motor bearings are also subject to an axial force. For axial forces, the spring-loading of the bearings can be overcome so that the rotor moves corresponding to the axial bearing play present (up to 0.2 mm).

The permissible axial force can be approximately calculated using the following formula:

$$F_A = 0.35 * F_Q$$

2.3 Axial forces

Space for your notes

3

Motor Components (Options)

3.1 Thermal motor protection

A temperature sensor is integrated in the stator winding to sense the motor temperature and provide thermal motor protection.

Temperature sensor, type Q63100–P426–M135

Characteristics acc. to DIN 44081

Characteristics

PTC thermistor

Use

For motors with the following shaft heights:

- shaft heights 36 and 48: 2 integrated PTC thermistors (in series)
- shaft heights 63 and 132: one integrated PTC thermistor

Resistance when cold (20° C): $< 250 \Omega$

Response temperature: $155^\circ \text{ C} \pm 5^\circ \text{ C}$

Connection: via the encoder cable

The change in resistance is **not** proportional to the change in the winding temperature.

The evaluation circuit signal in the SIMODRIVE drive converter must externally evaluated.

High short-term overload conditions require additional protective measures as a result of the thermal coupling time of the sensor.

The cables for the temperature sensor are included in the pre-assembled encoder cable.

3.1 Thermal motor protection

Caution

The integrated temperature sensor protects the servomotors against overload conditions:

Shaft heights 36 and 48 to $2 * I_0$ 60 K
from shaft height 63 to $4 * I_0$ 60 K

Sufficient protection is no longer provided for thermally critical load situations, e.g. a high overload condition at motor standstill. This means that as an additional protective measure, it is necessary, for example, to use a thermal overcurrent relay.

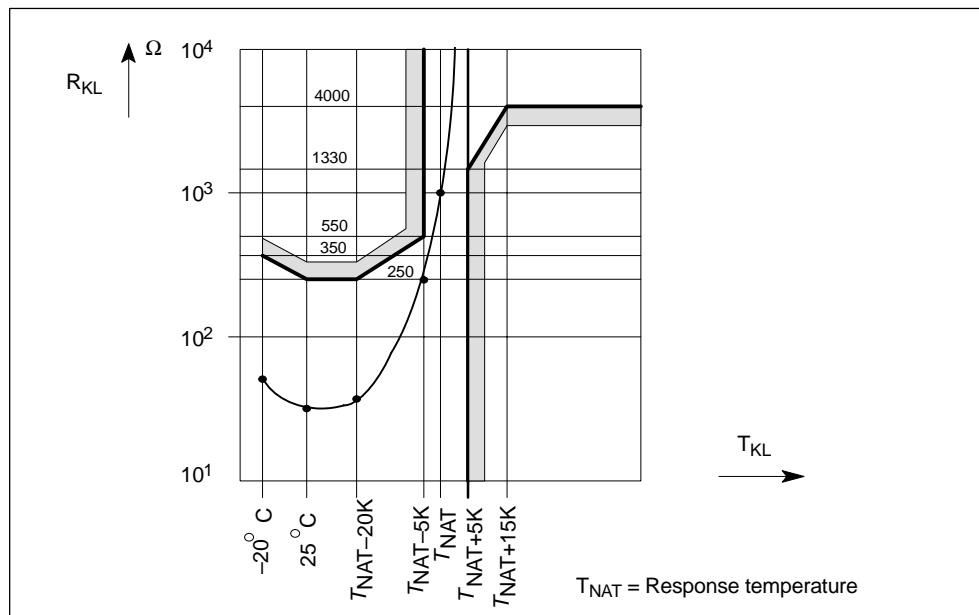

Fig. 3-1 Resistance characteristic

3.2 Encoders

Table 3-1 Overview of the encoders used

Motor types	Tach. system 1FU1030	Tach. system 1FU1050	Incremental encoders ROD 320.005	Incremental encoders ROD 426	Prepared for mounting encoders using a synchronous flange

1FT5 13□		X	X	X	X

3.2 Encoders

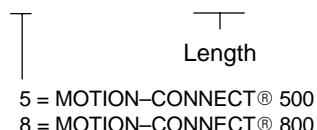

3.2.1 Tachogenerator system

- Version: Brushless analog encoder system
- Coupling: Via a taper on the drive end (this is integrated in the motor)
- Function:
- Tachometer to sense the speed actual value
 - Magnetic elements or Hall switch system as rotor position encoder for inverter control
- Output signals:
- Trapezoidal voltage signals from the tachogenerator
 - Absolute signal for the rotor position
18 pieces of information per motor revolution
- Connection: Connector with pre-assembled encoder cable

Peak value, phase voltage at the rated speed	16/40 V	40 V
Voltage tolerance	+15 %, -5 %	± 8 %
Voltage calibration	± 20 %	± 20 %
Peak ripple	≤ 1 %	≤ 0.5 %
Linearity error	≤ 0.2 %	≤ 0.2 %
Reversing error	≤ 0.2 %	≤ 0.2 %

Encoder cable: 6FX□202–2CB31–□□□0

Mating connector:

6FX2003–OCE12

3.2.2 ROD 320.005 incremental encoders

Version:	Optical encoder system with different pulse numbers (refer to the Catalog)
Coupling:	Via a taper on the drive end (this is integrated in the motor)
Application:	Indirect measuring system for digital position control loop
Evaluation:	Incremental
Output signals:	Squarewave; RS422 (TTL)
Connection:	Connector

Table 3-3 Technical data, ROD 320.005 pulse encoder

Mech. speed	max. 8500 RPM
Electr. speed	Dependent on the pulse number (refer below)
Operating voltage	5 V DC $\pm 5\%$
Current drain	≤ 150 mA (without load)
Frequency range	0 to 300 kHz
Edge clearance	$a \geq 420$ ns
Delay V_{a0} to V_{a1} and V_{a2}	$t_d \leq 50$ ns
Output load capacity	$I_{high} \leq$ DC 20 mA $I_{low} \leq$ DC 20 mA; $C_{Load} \leq 1000$ pF
Short-circuit strength	Briefly, all outputs with respect to 0 V; 1 output continuously at ≤ 25 °C
Light source	Vibration-proof LED
Operating temperature	-30 °C to +100 °C
Intrinsic moment of inertia	$0.035 * 10^{-4}$ kgm ²
Weight	0.25 kg

3.2 Encoders

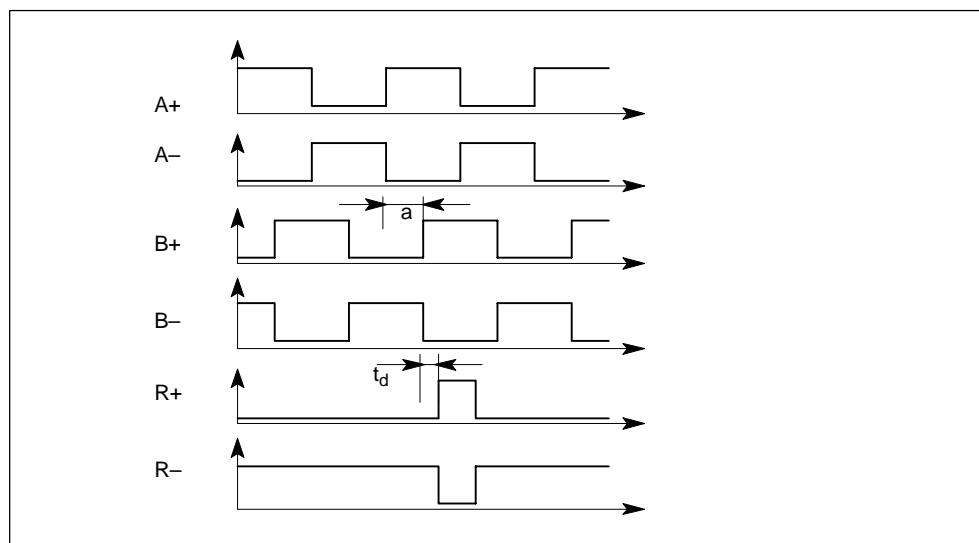

Fig. 3-2 Signal characteristic for clockwise direction of rotation

The servomotors may only be utilized for an overtemperature for $\Delta T = 60 \text{ K}$.

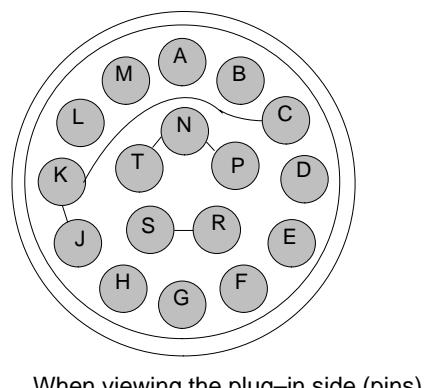

Maximum electrical speed:

$$n_{\max} = \frac{f_g * 10^3 * 60}{\text{Pulse number}} \text{ [RPM]}$$

f_g [kHz] Limiting frequency (-3dB)

Connection assignment for 17-pin flange-mounted socket with pin contacts

PIN No.	Signal
A	A+
B	B+
C, J, K	+5 V
D	A-
E	B-
F	R+
G	R-
H	Shield
N, P, T	0 V
R, S	Bridge
L	V_{as}^1

Mating connector: 6FC9348-7AV01 (socket)

Pre-assembled cable: refer to Catalog NC Z

1) Fault signal: LED monitoring

3.2.3 ROD 426 incremental encoder

Version:	Optical encoder system with different pulse numbers (refer to the Catalog)
Coupling:	At the non-drive end through a bellows-type or plate-spring coupling (mounted at the motor); synchronous flange
Application:	Indirect measuring system for digital position control loop
Output signals:	<ul style="list-style-type: none"> • squarewave; RS422 (TTL) • 2 channels offset through 90° electr. • one zero pulse per revolution
Evaluation:	Incremental
Connection:	Connector

Table 3-4 Technical data, ROD426 pulse encoder

Speed	max. 12 000 RPM
Operating voltage	5 V DC $\pm 5\%$
Current drain	≤ 150 mA (without load)
Frequency range	0 kHz to 300 kHz
Signal edge	RS 422 (TTL)
Minimum edge clearance V_{a1} to V_{a2}	≥ 0.45 μ s at 300 kHz
Electrical resolution	500 to 5000 pulses/revolution (corresponds to the resolution of the pulse disk); for external multiplication, up to 20 000 pulses/revolution
Degree of protection (acc. to DIN 40050)	<ul style="list-style-type: none"> • without shaft input: IP 67 • with shaft input: IP 64
Operating temperature	-30 °C to +100°C
Storage temperature	-30 °C to +80 °C
Vibration stressing (acc. to DIN IEC 68-2-6)	100 m/s ² (50...2000 Hz)
Shock stressing (acc. to DIN IEC 68-2-29)	1000 m/s ² (11 ms)
Moment of inertia of the mounting encoder incl. the coupling and motor shaft	$0.0175 * 10^{-4}$ kgm ²
Moment of inertia of the encoder	$1.45 * 10^{-6}$ kgm ²
Weight	0.25 kg

6FX2003-0CE12 (socket)

Pre-assembled cable:

refer to Catalog NC Z

1) Fault signal: LED monitoring

3.2 Encoders

3.2.4 Mounting encoders with synchronous flange

For this particular version, the ROD 426 incremental encoder is mounting-compatible

Order designation: G51

Application:

- SIMODRIVE sensor incremental encoder with synchronous flange:

– 6FX2001-2□□□ with RS 422 (TTL)

– 6FX2001-3□□□ with sinusoidal 1Vpp

– 6FX2001-4□□□ with HTL

as well as mounting-compatible encoders

- SIMODRIVE sensor absolute value encoder with synchronous flange:

– 6FX2001-5□S□□ with SSI interface

– 6FX2001-5□E□□ with EnDat interface

– 6FX2001-5□P□□ with Profibus DP interface

as well as mounting-compatible encoders

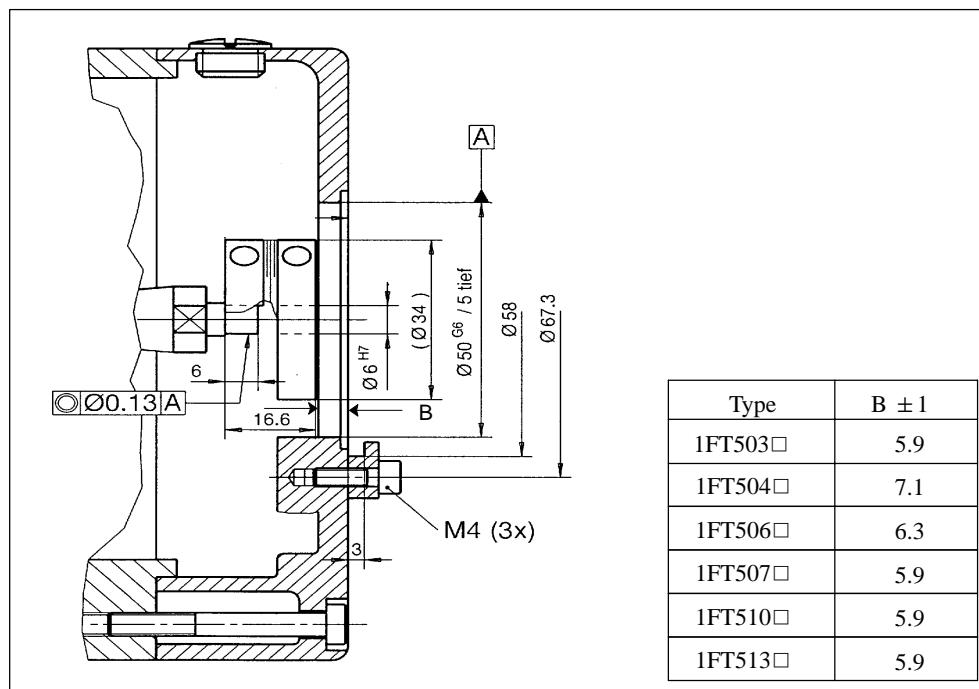

Fig. 3-5 Mounting absolute angular encoders with standard pulse encoder flange at
motors 1FT503□ to 1FT513□

3.3 Holding brake

For a description of the function, refer to the "General Section" documentation.

The holding brake can be retrofitted!

This does not change the motor length.

Table 3-5 Technical data of the holding brakes used for 1FT5 motors

Motor type	Brake type	Holding torques M ₄ ¹⁾ [Nm]		Dyn. torque M _{1m} [Nm] 120 °C	DC current [A]	Power drain [W]	Opening time t ₂ ¹⁾ [ms]	Closing time ¹⁾ [ms]	Moment of inertia [10 ⁻⁴ kgm ²]	Highest switching work ^{2) 4)} [J]
		20 °C	120 °C							
Standard motors, force-ventilated										
1FT503□	EBD 0.11B	1.2	1.0	0.75	0.3	7.5	20	10	0.07	24
1FT504□	EBD 0.2B	2.0	1.5	1.3	0.6	13	40	20	0.4	122
1FT506□	EBD 0.8B	12	10	7	0.7	16	55	15	1.1	291
1FT507□	EBD 2B	28	23	13	0.93	22	100	30	7.6	1005
1FT510□	EBD 4B	100	80	43	1.4	32	180	20	32	2150 ³⁾
1FT513□	EBD 8B	200	140	60	1.7	40	260	70	76	9870
Short motors										
1FT507□	EBD 0.4B	6.5	5	3.5	0.8	20	30	15	1.1	148
1FT510□	EBD 2.2B	20	15	13	0.9	22	70	35	9.5	987

M_{1m} = Average dynamic torque determined from the slip time t₃

M₄ = Torque which can be transmitted taking into account the max. solenoid temperature, fluctuations in the frictional coefficient and spread of characteristic data

Refer to the "General Section" documentation for a definition of torques and switching times in compliance with VDE 0580.

-
- 1) Standardized acc. to VDE 0580 with resistor and diode
 - 2) for each emergency stop with n=3000 RPM
 - 3) for each emergency stop with n=2000 RPM
 - 4) W=1/2 * J_{tot} * ω²;
J_{tot} in [kgm²],
ω in [1/s], W in [J]

 3.4 Working brake (option C00)

3.4 Working brake (option C00)

The working brake is a fail-safe brake. This means that the brake is closed when it is in a no-current condition. However, the brake can be released in the no-voltage condition using a manual release lever.

The working brake cannot be ordered in conjunction with an integrated or mounted position encoder. Further, the brake can only be mounted to standard non-ventilated motors (not for 1FT503□, 1FT504□, 1FT506□ and not for short motors).

Mounting:	Non-drive end
Degree of protection:	IP 54
Connection:	24 V DC through a terminal box
Circuit connection:	as for the holding brake
Dimensions:	refer to Section 4.

Braking torque M can be subsequently reduced by up to 50% using the setting ring.

Table 3-6 Technical data, working brake

Motor type	Brake type	Brake torque m at speed n		Max. speed [RPM]	Highest switching power [kJ/h]	Rated- power [W]	Inter- locking- time [ms]	Moment of inertia [10 ⁻⁴ kgm ²]	Highest switching work (nominal value) [MJ]

/Z/ Catalog NC Z

Connection Technology and System Components for SIMATIC, SINUMERIK,
MASTERDRIVES and SIMOTION

Order No.: E86060-K4490-A101-B1

Order No.: E86060-K4490-A101-B1-7600 (English)

Electronic Documentation

/CD1/ DOC ON CD

The SINUMERIK System

(includes all SINUMERIK 840D/810D and SIMODRIVE 611D documents)

Order No.: 6FC5298-6CA00-0BG3

Manufacturer/Service Documentation

/PJM/ Planning Guide, AC Servomotors

SIMODRIVE 611, MASTERDRIVES MC

General Section, 1FT5, 1FT6, 1FK6, 1FK7

Order No.: 6SN1197-0AC20-0BP0

/PJAL/ Planning Guide, AC Servomotors

SIMODRIVE 611, MASTERDRIVES MC

AC servomotors, General Section

Order No.: 6SN1197-0AD07-0BP0

- /Pfk7/ Planning Guide, AC Servomotors**
SIMODRIVE 611, MASTERDRIVES MC
AC Servomotors 1FK7
Order No.: 6SN1197–0AD06–0BP0
- /Pfk6/ Planning Guide, AC Servomotors**
SIMODRIVE 611, MASTERDRIVES MC
AC Servomotors 1FK6
Order No.: 6SN1197–0AD05–0BP0
- /Pft5/ Planning Guide, AC Servomotors**
SIMODRIVE
AC Servomotors 1FT5
Order No.: 6SN1197–0AD01–0BP0
- /Pft6/ Planning Guide, AC Servomotors**
SIMODRIVE 611, MASTERDRIVES MC
AC Servomotors 1FT6
Order No.: 6SN1197–0AD02–0BP0
- /Pph/ Planning Guide, AC Induction Motors**
SIMODRIVE
AC Induction Motors for Main Spindle Drives
1PH2, 1PH4, 1PH7
Order No.: 6SN1197–0AC60–0BP0
- /Ppm/ Planning Guide, Hollow Shaft Motors**
SIMODRIVE
Hollow Shaft Motors for Main Spindle Drives
1PM6 and 1PM4
Order No.: 6SN1197–0AD03–0BP0
- /Pjfe/ Planning Guide, Synchronous Build-in Motors**
SIMODRIVE
AC Motors for Main Spindle Drives
Synchronous Build-in Motors 1FE1
Order No.: 6SN1197–0AC00–0BP4

/PJTM/ Planning Guide, Build-in Torque Motors

SIMODRIVE
Build-in Torque Motors 1FW6
Order No.: 6SN197-0AD00-0BP1

/PJLM/ Planning Guide, Motor Spindles

SIMODRIVE
ECO-Motor Spindle 2SP1
Order No.: 6SN1197-0AD04-0BP0

/PJLM/ Planning Guide, Linear Motors

SIMODRIVE
Linear Motors 1FN1 and 1FN3
Order No.: 6SN1197-0AB70-0BP3

/PJU/ Planning Guide, Drive Converters

SIMODRIVE 611
Drive Converters
Order No.: 6SN1197-0AA00-0BP5

/EMV/ Planning Guide, EMC Design Guidelines

SINUMERIK, SIROTEC, SIMODRIVE
Order No.: 6FC5297-0AD30-0BP1

Operating Instructions 1FT5062 – 1FT5138

Bestell-Nr. / Order No.: 610.41199.21

Operating Instructions 1FT5020 – 1FT5046

Bestell-Nr. / Order No.: 610.42078.21

Operating Instructions 1FT6

Bestell-Nr. / Order No.: 610.43410.21

Index

A

Additional data, 1FT5/1-15
Armature short-circuit braking, 1FT5/1-23
Axial force stressing, 1FT5/2-75

B

Brake resistors, 1FT5/1-23

C

Cantilever force diagrams, 1FT5/2-70
Cantilever force stressing, 1FT5/2-70
Connection assignment, 1FT5/1-31
Cooling, 1FT5/1-29
Core types, 1FT5/1-20

D

Danger and warning information, vii
Drive-out coupling, 1FT5/1-33

E

Electrical connections, 1FT5/1-31
Encoders
 Overview, 1FT5/3-79
 with synchronous flange, 1FT5/3-86
ESDS information and instructions, x

F

Features, 1FT5/1-13
Forced cooling, 1FT5/1-29

G

Gearboxes, 1FT5/3-89

H

Holding brake, 1FT5/3-87
Hotline, vi

I

Incremental encoder, ROD 426, 1FT5/3-83
Incremental encoders, ROD 320.005,
 1FT5/3-81

O

Options, 1FT5/1-15, 1FT5/1-19
Order designation, 1FT5/1-14

P

Planetary gearbox
 1-stage, 1FT5/3-89
 2-stage, 1FT5/3-91

R

Resistance characteristic, 1FT5/3-78

S

Speed-torque diagrams
 Force-ventilated, 1FT5/2-55
 Short motors, 1FT5/2-64
 Standard motors, 1FT5/2-36

T

Tachogenerator system, 1FT5/3-80
Technical data, 1FT5/1-20
Temperature sensor, 1FT5/3-77

W

Working brake, 1FT5/3-88
